(Specifically Page 380) Section 12.4 Universal Forces (Poorly covered in book.) A gravity force field exists around all objects. (More massive = stronger) Force always acts to pull objects together (attractive force). As the mass of object increases the force increases. As distance between (r) increases the force decreases.

In vector land, the normal force is the contact force perpendicular from the surface on which an object lies at rest. For surfaces that lay flat horizontally, the normal force points straight up, the opposite direction of the force of gravity. It's what keeps objects from falling through whatever matter lies between it and the center of the earth.
